The primacy purpose of this study is to make reasonable construction scheme of Trans-Korean Railway(TKR), the core of Trans-Asian Railway (TAR), which has been propelled by ESCAP, so I analyzed competitive power between the sea transport routes and the TAR routes via TKR from Far-East to Europe, and a demand of cargo transport, which will be transported by TKR, then I emphasized necessity of constructing TKR.

This study is conducted through the inspection report regarding the actual status of Trans-Korean Railway, all the relevant debate materials and reports of KMI, KOTI, and based on the content of previous ESCAP's TAR study.

A construction of TKR expects a vast of the economic effect to South Korea and North Korea. Also, It coincides with our's multimodal system and international logistics system.

Therefore, in order to construct of TKR, We have to give our our best effort.
